The Edit Alias button & WS is the same where you can find from Secondary session.			
The Edit Alias button will not have any dependency or checking. It will display all the time for Primary Session.

Additional checking added

For primary and secondary session, pls help to change the display name to Alias Name for display. The 1st checking should be checking if there is any Alias name return from BE. If NO, will only display the deviceModel. Only 2 checking for display.
