- Status changed from New to Resolved

- Assignee changed from Amirul Umar Pandai to chok yee fan

Changed App.routing.tsx structure to include Drawer as a root component.

All Drawer instances besides root component has been removed, replaced with calls to useOutletContext to reset page data on clicking drawer item.

Note: example is not committed. Create your own after pulling to test.

Drawer parent component using React Router Outlet

issue
-----
extra code at detail form page,

expected
-----
remove the extra code at detail form page. otherwise need to find a way how to archive calling single method avoid duplicate code.
