Focus on the profile cc_core first, second is cc_auth, cc_topnavbar and cc_iam.

1. need to execute script for build the react. e.g. yarn build
2. after build the output need to put it into the NGNIX
3. run the docker and able to browse from the browser.

Expected output
DockerFile
compose.yaml
command for run/build the docker

e.g.
https://github.com/docker/awesome-compose/tree/master/react-nginx

Already test by installing the docker,
yarn docker:build and yarn docker:up

Cannot find any issue.
